

# MYTH:

The COVID-19 vaccine was developed with or contains controversial substance, such as fetal tissue.

---

# FACT:

The first two COVID-19 vaccines to be authorized by the FDA contain mRNA and other, normal vaccine ingredients, such as fats (which protect the mRNA), salts, as well as a small amount of sugar.

**These COVID-19 vaccines were not developed using fetal tissue, and they do not contain any material, such as implants, microchips or tracking devices.**
